AMERICA'S #1 MUZZLELOADING BULLET

2017

POWERBELT IS AMERICA'S #1 MUZZLELOADING BULLET

THE POWERBELT DIFFERENCE

PowerBelt® Bullets are the most advanced muzzleloading bullets ever developed, with all of the benefits of sabot bullets but none of the problems. Like sabots, PowerBelts' patented snap-on base creates a perfect gas seal, providing consistent pressures and superior accuracy. But unlike sabots, PowerBelt Bullets are full-caliber sized, easier to load and don't require cleaning after every shot. Available in Platinum, AeroLite, Copper or Pure Lead grades, PowerBelt Bullets are legal in almost every state, including Colorado and Pennsylvania.

HIGHER VELOCITIES

The perfect gas seal of the PowerBelt® Bullet base eliminates gas blow-by, providing consistently higher velocities.

SUPERIOR ACCURACY

The consistent gas pressures provided by the PowerBelt base give almost identical bullet velocity and trajectory every time. The PowerBelt base also protects the tail of the bullet from flame cutting, so the bullet's overall ballistic integrity is maintained from the time you load it until it hits your target. Combine all this with the aerodynamic superiority of the AeroTip design and you've got the ultimate long-range muzzleloader bullet.

PERFECT EXPANSION

PowerBelt Bullets are available in either AeroTip, Hollow Point or Flat Point designs, providing shooters the ability to choose the expansion performance that is best for their game – from a coyote to a grizzly bear. Each bullet tip design provides varying degrees of expansion on impact – the AeroTip, in addition to its aerodynamic benefits, penetrates deeper before expanding; the Hollow Point produces the most immediate expansion; and the Flat Point provides the most controlled expansion and maximum weight retention. So, by matching tip design with bullet weight, you can choose the perfect bullet for whatever game you're hunting.

- **AeroTip** for deeper penetration on light or medium weight game (Deer, Elk, Black Bear)
- **Hollow Point** for maximum expansion on lighter skinned game (Varmints, Deer)
- **Flat Point** for heavier skinned game (Black Bear, Moose, Grizzly Bear)

FASTER LOADING

Unlike sabots, PowerBelt Bullets are easier to load because the bullet itself is one-thousandth of an inch under-bore size, while the pliable plastic base is slightly over-bore. So, the entire PowerBelt bullet/base assembly loads easily with the plastic base securing the bullet tightly over the powder charge until, upon ignition, the soft lead bullet expands to fill the rifling. This ease of loading eliminates potential accuracy-robbing damage to the bullet tip.

CLEANER SHOOTING

With sabots, for maximum accuracy you have to clean your barrel after every shot and sometimes just to get the next sabot down the barrel. Why? Sabots leave a plastic residue in the barrel rifling after every shot. If not thoroughly cleaned, this residue robs your barrel of accuracy and makes loading a quick follow-up shot very difficult. With PowerBelt Bullets, there is no plastic residue left behind in the rifling grooves. That's because the PowerBelt's plastic base follows behind the expanded bullet and drops away when the bullet leaves the muzzle having done its job of providing a perfect gas seal. This means you can shoot 6 to 8 PowerBelts before cleaning the barrel to remove excess powder fouling.

HARDER HITTING

While sabot bullets are under-bore in size to accommodate the sabot, PowerBelt Bullets are full caliber size and expand upon ignition to a full-bore diameter of .45, .50 or .54 caliber, delivering maximum knockdown power and creating larger diameter wound channels. Plus, they arrive with more weight and energy to penetrate heavy bone.

FOUR PERFORMANCE GRADES TO MEET YOUR NEEDS

PowerBelt Bullets are available in four different performance grades, with all four designed to deliver all the benefits that have made PowerBelt the #1 muzzleloading bullet in America. However, each grade is designed to provide specific advantages – allowing you to select the PowerBelt that is perfect for the particular type of game you are hunting, the propellant charge you'll be using, and the distance at which you'll likely be shooting.

LOADS FASTER. SHOOTS CLEANER. HITS HARDER.

POWERBELTBULLETS.COM

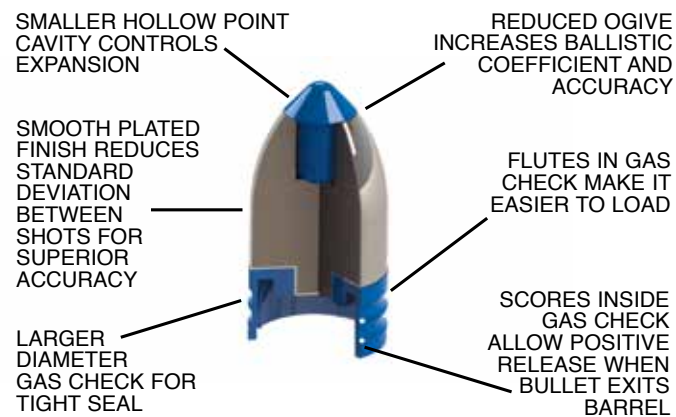

PLATINUM SERIES

PowerBelt Platinum AeroTip Bullets utilize an advanced plating technology, a more aggressive bullet shape and a fluted gas check design that combine to make the Platinum Series the best performing high velocity PowerBelt ever.

PowerBelt Platins are plated using a proprietary process that creates a smoother, more uniform surface that reduces the standard deviation between shots. This plating results in reduced resistance as the bullet travels down the bore, producing faster, more consistent velocities to improve both trajectory and accuracy.

PowerBelt Platins also deliver an improved ballistic coefficient by utilizing a more aggressive bullet taper design. Not only does the taper provide for a more aerodynamic flight, it also helps control the rate of expansion – regardless of powder charge or bullet velocity on impact.

Also, the Platinum's larger diameter, fluted gas check fits more tightly than that of a standard PowerBelt, and is reinforced to better withstand magnum pressures, improving both velocity and accuracy.

FOR CONTROLLED EXPANSION AND DEEP PENETRATION

**SUPERIOR ACCURACY
HIGHEST VELOCITY
OPTIMAL EXPANSION**

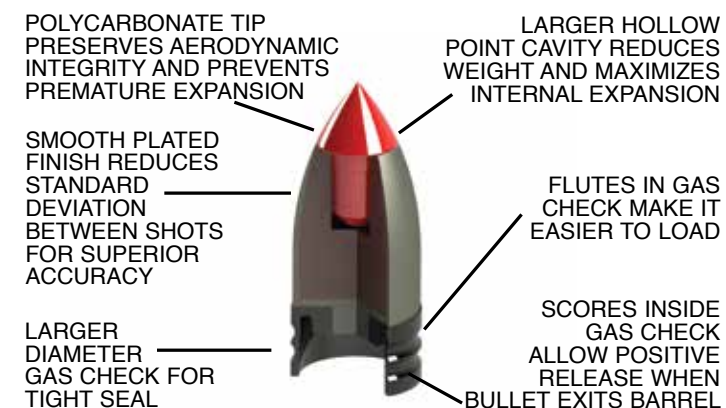

AEROLITE SERIES

PowerBelt AeroLite® Bullets borrow many of the PowerBelt Platinum's technical advantages – such as its plating technology, fluted gas check, and aggressive taper. However, the AeroLite bullet itself is completely different on the inside, being specifically designed to deliver optimal performance when used with standard or magnum loads.

The AeroLite has a much larger hollow point cavity than either the Platinum or Copper PowerBelts. This larger cavity maximizes expansion capability while eliminating weight from the core of the bullet, allowing the bullet to be substantially longer than standard projectiles of similar weight. A longer bullet length produces more stability in flight and therefore, greater accuracy. A super-hard polycarbonate AeroTip fills the void of the oversized hollow point and serves to both optimize aerodynamics in flight and control expansion on impact. All of these AeroLite technologies are fine-tuned to perform best at “standard charge velocities” (1800 FPS or less on impact) – providing magnum performance without the magnum recoil.

This does not mean, however, that magnum charges can never be used with AeroLites. In hunting situations where long-range shots are the norm, AeroLites may indeed be the best choice – even with a 150 grain load.

MAXIMUM LONG RANGE ACCURACY AND KNOCK-DOWN ENERGY

**LONGER AERODYNAMIC DESIGN
LIGHTER WEIGHT
SHOOTS FLATTER AND FASTER**

THE BULLETS THAT MADE SABOTS OBSOLETE

COPPER SERIES

Our copper-plated PowerBelts have become the most popular muzzleloading projectiles since the roundball and truly are “the bullets that made sabots obsolete.” They are #1 for a reason, and if you don’t believe us, ask any hunter who has shot them. The thin copper plating greatly reduces bore friction for higher velocities – while still allowing for optimal bullet expansion within the rifling grooves.

Available in three tip designs – AeroTip, Hollow Point and Flat Point – PowerBelt Coppers offer the widest variety of grain weights in the PowerBelt line-up, with several different weights from 195 grains all the way up to 444 grains. With PowerBelt Copper Series bullets you’ll find the right combination for whatever game you’re chasing.

THE ORIGINAL

PURE LEAD SERIES

The original PowerBelt Bullet was the Pure Lead, and it’s still a great choice for the economy-minded shooter, whether for hunting or just target shooting. Available in three different grain weights (295, 348 and 405) and two different tip designs.

PowerBelt Pure Lead bullets will get the job done with authority. And in states where copper-plated bullets are not allowed, PowerBelt Pure Leads are the highest tech, best performing bullets you can shoot – and still be legal!

THE BEST ACCESSORIES FOR THE BEST MUZZLELOADING BULLET

Today's muzzleloading hunters know that speed and accuracy can be the difference between not only getting a shot at a trophy, but also making the shot count. That's why you can trust your hunt to PowerBelt loading accessories. By loading America's #1 bullet with the PowerBelt Bullet Starter, SpeedClip™ and the Rotoload™ 5-in-1 Field Loading Tool, you'll get loaded faster and make more accurate shots.

PowerBelt Bullet Starter — This patented design ensures that your PowerBelt bullet is not damaged during loading, which protects the aerodynamic integrity of the bullet for maximum accuracy. The set comes with two sets of three loading tips to fit hollow point bullets and one set of three tips for polymer point bullets.
AC1500 BULLET STARTER KIT
WITH 9 ATTACHMENTS \$17.95

PowerBelt SpeedClip™ — Designed for super fast access when reloading in the field, the PowerBelt SpeedClip holds three loaders, each with a PowerBelt Bullet and magnum pellet charge — plus four 209 primers. This convenient field accessory is weatherproof and impact resistant, and it easily attaches to your gun sling, your belt or a lanyard for quick access. No more digging in your pockets for reloads and primers. The SpeedClip helps you save precious seconds that could be the difference between getting that shot at a trophy or not.

AC1501 SPEEDCLIP™ LOADER \$7.95
